

## COVID-19 Safety Measures for Pauli Family Guests

As of June 5, 2020 the State of Hawaii provided the following COVID-19 information from the CDC. [https://health.hawaii.gov/docd/files/2020/01/2019\\_nCoV\\_FAQ.pdf](https://health.hawaii.gov/docd/files/2020/01/2019_nCoV_FAQ.pdf):

**At this time, our best research shows COVID-19 is spread in the following ways:**

- Primarily between people who are in close contact with one another (within 6 feet) or in contact for an extended time.
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks. Droplets can land in the mouth or nose of someone nearby or possibly be inhaled into the lungs.
- COVID-19 may be spread by people who are not showing symptoms.
- There is evidence that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose or possibly eyes. This is not thought to be a primary way the virus spreads, but we are still learning.

**Your vacation unit has been cleaned and prepared for you in the spirit of Mālama. (a Hawaiian value meaning to care for or serve). In addition to our normal high cleaning standards, your vacation unit has received Enhanced Cleaning suggested by the CDC to address the greatest COVID-19 risk areas.**

- 1. To address the risk associated with the possibility Respiratory Droplets may be in the air, one or more of the following processes has been used:**
  - a. The unit has remained empty for more than 18 hours. Research has show Respiratory Droplets fall to the ground within 3-hours. 18 hours gives time for the remainder to fall and deteriorate so they lose their strength. Your unit's windows & doors were opened during cleaning to further dissipate any droplets. When the situation does not allow 18+ hours between guests, one of the following alternatives was utilized.*
  - b. The use of UV-C light waves to destroy the virus's ability to replicate.*
  - c. The use of IWave technology installed in the Mini-Split or Central AC system to clean the air of contaminates & kill bacteria and viruses.*
  - d. The use of electrostatic technology to spray & sanitize the air and surfaces.*
- 2. To address the less concerning risk that arises from Touching Surfaces or Objects that may have the virus on them, the following has also been done.**
  - a. A thorough cleaning of porous and nonporous surfaces.*
  - b. In addition, your cleaner has used a CDC recommended, EPA N-list virus killing sanitizer/disinfectant on all high-touch surfaces such as (but not limited to) door knobs, light switches, remote controls, sinks, countertops, bathrooms, hangers etc.*

**Although these extra measures have been taken, no guarantee can be made that our guests will not contract the virus during their stay on Maui. Please exercise caution and use prevention measures during your stay**

## COVID-19 Safety Measures for Pauli Family Guests

### Exercise Prevention during your Stay

**Because the primary method of spreading the virus involves receiving respiratory droplets from infected persons, your primary prevention measures should focus on:**

1. **Practice social distancing.**
  - a. **Keep at least six feet away from other people, to keep droplets away from each other when speaking, coughing, or sneezing.**
  - b. **Avoid groups of more than a few people.**
2. **When out in public or around other people, consider wearing a mask/facial covering. Most places of business in Hawaii require wearing a facial covering to enter.**
3. **Avoid touching your face with unwashed hands.**

**Secondarily even though it is possible to catch the virus by touching a surface on which the virus droplets have landed or which has been touched by those who are sick with the virus, it is no longer considered to be a primary method by which the virus spreads, it is still considered wise to practice the following:**

4. **Wash hands often. The preferred method to clean hands is to wash them frequently using soap and water for at least 20 seconds. Wash frequently but especially when returning from public places, after using the bathroom, before eating, and after blowing your nose, coughing or sneezing.**
5. **If soap and water are not available (e.g. when in public) use hand sanitizers**

**When using common areas such as pools, tennis courts, etc. follow posted safety rules.**

It is recommended that all guests visit the Maui COVID-19 website for current guidelines. <https://www.mauicounty.gov/2370/COVID-19-Coronavirus-Information>.

***Should you believe that you may have symptoms of COVID-19 during your stay, please use the CDC symptom checker and/or CALL a medical clinic such as one of those listed below. They will provide current guidance on how you should proceed & help you schedule a test if it is determined that you need one. <https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html>***

***Then contact Matt (312) 315-4544 or [matt@waileaekahivillage.com](mailto:matt@waileaekahivillage.com)) or Cheri (206) 446-4700. Keep them informed so that they can help you if needed & schedule additional enhanced cleaning for after your departure to protect the next guests.***

***Symptoms include the following: \*Mild to severe respiratory illness \* Cough • Fever • Shortness of breath or trouble breathing • Chills • Muscle pain • Sore throat • New loss of taste or smell \* Some patients may not report fever, especially the very young, elderly, immunosuppressed, and people taking certain fever-lowering medications.***
